```
                        if os.path.exists(compressed_path):
                            os.remove(compressed_path)
                except:
                    pass

            # Cleanup compressed temporary file if it was created
            if compressed_path and compressed_path != image_path:
                try:
                    if os.path.exists(compressed_path):
                        os.remove(compressed_path)
                except:
                    pass
```

let's test with a sample image to see the compression
